

# Alfresco Doors

designed for entertaining

M&B Alfresco doors will bring the outside in and maximise your living and entertaining areas. These visually impressive door systems are designed to create a sense of space. Available in Jarrah, Meranti, Cedar and Aluminium.

M&B.....supply and installation of quality doors since 1969

## STYLISH BI-FOLDS [ the beauty of timber - Jarrah, Cedar + Meranti ]

The **M&B Alfresco folding timber door system** allows you to open up to your entertaining areas. Delivers the reality of a fully weatherproof system that can be completely folded to provide unrestricted access.

Designed to be user friendly with effortless fingertip operation, the M&B Alfresco system provides solutions that allow you to transform your living areas into one continuous entertainment area in no time at all.

The M&B timber Alfresco folding door is available in quality solid Jarrah, Cedar or Meranti timber. Door componentry meets Australian Standards ensuring that the system can be used externally, with confidence.

**Flydoors:** An optional retractable flyscreen can be fitted up to 4 metres wide.

## FLEXIBILITY IS THE KEY

Available outward folding and with a choice of several door styles, the M&B Alfresco system not only suits the residential situation, but is ideal for commercial use in cafes, restaurants and hotels. It may also be used internally to separate areas where an unsightly solid partition is unsuitable.

Access in or out is made simple when the M&B Alfresco door system is closed. Single door or pairs of doors can be located at one end or in the centre\* of a section of doors, enabling the door to be used as a normal door.

\* Subject to panel numbers and configuration of folding door.

## SECURITY BUILT IN

Easy to operate the security of the M&B Alfresco folding door system is enhanced by the option of key locking, flush fitting foot bolts in a variety of finishes to suit decors.

Door panels are glazed with a single piece of 6.38mm laminated glass providing strength and extra protection from the elements. A range of tinted, laminated glass is also available to suit individual requirements.

### laboratory testing

Tested in N.A.T.A. Registered Laboratories on timber doors and framing provided by third parties.

	AS2047.1	centor eclipse™
min water penetration	450Pa	450Pa
max air infiltration (per sq.m.)	5.0 litres/sec	0.08 litres/sec
max operating force (initiate)	180N	12N
max operating force (sustain)	110N	11N
min ultimate strength	700Pa	3500Pa
non-cyclonic rating	N1	N4
cyclonic rating	C1	C3

## WEATHER SEALING

The M&B Timber Alfresco folding door system is specifically designed to be used in external applications. It utilises the centor eclipse™ door hardware system for timber bi-folds, which has been tested in accordance with A.S.2047 by an N.A.T.A. accredited laboratory. It successfully meets the maximum 450Pa water rating and 11/sec Commercial air-conditioning air rating.

## STYLISH BI-FOLDS [ worry free aluminium ]

The **M&B Alfresco aluminium door system** is designed for locations on or near the coast with optional stainless steel door hardware to ensure years of trouble free and effortless use. A combination of full sized commercial perimeter framing and specially modified stiles and rails achieve an attractive and functional alternative to the traditional look of timber. Featuring the same unique weather sealing system as the timber folding doors, the aluminium system comes complete with an aluminium frame and self draining sill to further enhance the weather proofing characteristics of the M&B Alfresco folding door system.

**Finishes:** A wide range of standard powder coat colours available.

## BI-FOLD WINDOWS [ perfect as serveries ]

The **M&B Alfresco folding window system** is ideal for use in serveries. They have no fixed glass panels or mullions & posts. This enables you to have large, wide opening windows providing ample space for serving and entertaining.

The M&B Alfresco folding window system is available in aluminium and timber.

\*As no bottom sill is used in the timber servery, weatherproofing must be provided by an overhang, such as a covered verandah.

## D-STACKER [ wider opening than conventional sliding doors ]

The M&B **aluminium D Stacker** is the natural choice where wide opening sliding doors are required.

D Stacker sliding doors open approximately 'two-thirds' of their width compared to standard sliding doors which open to less than half their width. The two sliding panels which slide in the same direction stack behind the third fixed panel.

Available as either a three-panel unit, with two stacking panels, or as a six panel unit, providing an expansive opening, with two panels moving towards one jamb and two towards the other.

**Flydoors:** An optional sliding flyscreen system can be fitted to the front of the glass doors.

## Configurations - make your choice easier

Below is a sample of the configurations that are available:

MB 2P

MB 1P+3P\*

MB 3P\*

MB 1P+5P\*

MB 4P

MB 2P+2P

MB 5P\*

MB 3P+3P\*

MB 6P

MB 1P+2P

\*M&B recommend odd number doors configurations for access purposes

Whilst M&B are able to advise the total weight of the folding door system, it is recommended that clients refer to their engineer/ builder for design requirements of the overhead support structure.

## Hardware Application

For hinging purposes only.
