

ENERGY EFFICIENT - CUT NOISE - WEATHER EXTRUSION

Shut the door on energy loss

The M&B EVO Frame has been designed with energy efficiency in mind. An Aquamac 21 weather seal is used around the jamb and across the tread to effectively 'seal' your door within the frame, providing insulation from draft, rain and wind. This ensures a reduction in air loss when heating and cooling your home, reduces water penetration and blocks out noise such as wind and passing road traffic.

The M&B EVO frame comes with an aluminium self-draining sill as a more durable alternative to a timber sill. Constant foot traffic and exposure to weather means your frame tread must be able to withstand the everyday activities in your home. The design of the self-draining aluminium sill will stop water leakage as well as create a barrier against insects, dust and wind. A metal sill protector is provided to ensure the aluminium sill is not damaged throughout the construction phase.

Contemporary aluminium, OPEN-IN self-draining tread. 160mm x 42mm

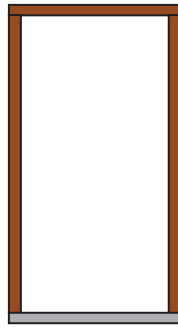

Contemporary aluminium, OPEN-OUT self-draining tread. 135mm x 35mm

Benefits include . . .

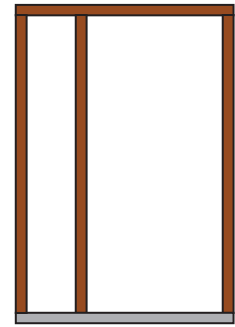

- energy saving
- seals your entrance door using Aquamac 21 weather seal
- improved insulation and noise reduction
- prevents drafts, insects and water penetration
- self draining aluminium tread which conducts rain away from the bottom of the door
- includes cavity blocks and flashing
- hushed sound of door closing
- no door seal (RP4) required
- available in Jarrah, Surian Cedar and imported hardwood
- available as 'open-in' and 'open-out' options
